

RIFE FREQUENCIES

So, unless you would be satisfied with sporadic results for minor conditions, it is suggested you use only the highest quality equipment and only the proper, proven procedures in your personal research. If you do, you may discover that nothing can approach what can be achieved through the application of these safe, time-tested frequencies (many for over 65 years)- and all without drugs, surgery, or radiation.

One day, the name of Royal Raymond Rife may ascend to its rightful place as the giant of modern medical science. Until that time, his fabulous technology remains available only to the people who have the interest to seek it out. While perfectly legal for veterinarians to use to save the lives of animals, Rife's brilliant frequency therapy remains taboo to orthodox mainstream medicine because of the continuing threat it poses to the international pharmaceutical medical monopoly that controls the lives - and deaths - of the vast majority of the people on this planet.

This is a compilation of frequencies from many sources. Many are based on anecdotes and are not well tested or widely used. Some are based on John Garvy (founder of SonRidge Health Centers) frequencies many of which are above audio range and converted by dividing by 64 and rounding, which may significantly affect response. Ditto for Hulda Clark frequencies a few of which are included and divided by 512. See their works to view more, and unconverted, frequencies, especially if a specific pathogen is known.

This list is also annotated but, of course, not completely. Research will still be necessary to ascertain causative pathogens for certain conditions. Many of the comments and annotations are from other frequency lists and many are from my own research.

Some frequency sets have "secondaries" which are extra frequencies to run if there is no response to the first set, or run along with the initial set to more assure response. Some contain numbered sets like (1), (2), and (3) which usually indicate single anecdotes but these may represent what worked when all other frequency sets failed. Ones marked with (exp) are experimental, which is quite the misnomer since all the frequencies should be considered experimental anyway.

Most people use the base frequencies (727/728, 784/786/787, 880, 464/465) in every session since they address a number of common pathogens which can be easily reinfected. Many typically use cleansing, relaxing, and general frequencies such as 304, 5000, 10000, and 3176 to finish sessions.

Many frequency sets state to "see" or "use" other frequencies. Ones to "see" may be causative agents and should be used if there is no

response to the initial set, like the "secondary" ones explained above. Ones to "use" are highly probable factors and should be used as part of the initial set. Further research and use yields a constant supply of new frequencies and this list is updated often.

There are possibly four ways that rife frequencies can be of use to you

Direct destruction

If you have a micro-organism, and you know the frequency, you can destroy it. If a client has a terrible case of Shingles, we know that that is caused by Herpes. Simply set the Rife Machine to the Herpes frequency 1552, and let it run for 1/2 an hour. In most cases, it will be gone in less than 3 days.

Plagues and epidemics

Looking through this chart you may be wondering, what use is a frequency to destroy the Bubonic Plague today. Aside from the morbid reality of Germ Warfare, hasn't the Bubonic Plague been wiped off the face of the Earth? Actually no, there are several reported cases every year. Of course, the odds of being one of the 10 or so people who get it every year are quite slim. However, almost everyone alive today who is of European decent is a descendant of a survivor of the Black (Bubonic) plague. That means that you can probably trace a direct blood line through the placenta along the female side, or the sperm and prostatic fluid on your fathers side of your family to a person who was infected with the Plague centuries ago. Homeopaths call this a miasm.

Don't be surprised if you, or one of your clients feels a slight tingling in the armpits (the Plague caused the lymph nodes to swell up) on this frequency. Does that mean you have an active form of the Bubonic Plague? No, but a watered down version of it may have been passing through your family blood line for the last 400 years, which may have been causing some health problems.

Immunizations

How about Diphtheria, or Rubella? Everyone in the U.S.A. gets a DPT shot when they are children. DPT stands for Diphtheria, Pertussis and Tetanus. That means that some part of these micro-organism, were injected into the body, past the defenses of the intestinal tracts and the skin. Did part of the virus survive? The unfortunate reactions that some children have to these immunizations (death, mental retardation, immune dysfunction et. al.) every year tells us that these immunizations are not always deactivated before they are injected.

Families of micro-organisms

Gonorrhea is not a problem in developed countries, but the frequency for Gonorrhea is the most useful frequency when it comes to the common cold. Either the common cold is

a respiratory version of Gonorrhea, or shares enough of the same structure as to be destroyed by the same frequency as Gonorrhea. Thus, although the Rife Machine is set for 20 frequencies, each frequency may be capable of destroying 100's different but similarly structured micro-organisms. One session may destroy 2000 different types of unwanted life-forms. Rife himself believed that there were at most 10 families of disease producing organisms.

The origin of the MORs (Mortal Oscillatory Rates or " Mortality Oscillator Rates" of bacteria and viruses), originally discovered by Royal Rife during the first half of the twentieth century, has perplexed many people since that time. While it is generally acknowledged that some type of resonance phenomenon destroyed or debilitated the organisms, it has been difficult at best to pinpoint any association of specific frequency with what is physically affecting these life forms during the time of their debilitation or demise.

USE AT YOUR OWN RISK, NO CLAIMS ARE MADE FOR EFFECTIVENESS.

304 - Sedation or pain relief, also nice to use as the last frequency of a set of frequencies
432, 484, 610, 690, 790 and 864 - Lyme disease - Please note the use of these frequencies
has produced what is known as a Herxheimer Reaction. As the spirochetes die, they
release

a protein toxin that can produce joint pains, weakness, and general malaise for a few days
following exposure. It has been suggested that one start slow with but a minute of
exposure

and then gradually increase the exposure time. One should not repeat an exposure until
all

effects and symptoms of the previous exposure have cleared.

676 - Helicobacterium Pylori - linked as a causative agent in stomach ulcers.

728 - A type of Cancer cell found in blood of people with Multiple Myeloma. Causes the
cells to disintegrate according to one researcher.

728, 800, 880 , 7760, 8000, 8250 - Flu virus

2050, 2180, 2452 - Non responsive to Cancer at 2128 or 2008. It has been suggested that
these Cancers are formed in response to some different stimulus than commonly occurs.

664, 764 - very beneficial for emotional ties to diseases. 664 has apparently caused
people to

giggle especially in a group exposure setting.

660, 728, 787 Epstein Barr virus also has been used for Mononucleosis.

1234, 3672, 7344 Opens bronchioles makes breathing easier seems to be helpful for
asthmatics. Also is quite sedating.7344 seems to work best of the three.

350, 360 Sharpens eyesight

1489, 1500, 1550, 2489 Herpes - relieves acute outbreak, but does not remove dormant
form from body. Use of 2489 for about 30 minutes seems to provide long term benefits.

470 - stopped involuntary tremors in left hand of a person with multiple sclerosis.

463 and 466 stopped involuntary tremors in a person with brain tumors.

915 and 918 plantar wart - use long exposure time - 15 to 30 minutes on each frequency.

2050 and 2250 used to correct chronic prostatitis - 10 to 15 minutes on each frequency.

Use

for a short interval will aggravate prostatitis!

3.6 and 6.3 Hz have been reported as being able to keep a person from becoming angry

72, 95, 190, 304 - Used for nausea and abdominal cramping

866, 430, 2213, 620 Chlamydia infections.

6000 - A master Central Nervous System Frequency. Release of emotional problems,
blocked seizures - but does nothing once seizure starts, stopped tremors in hands in
person

with Parkinson's disease.

Hepatitis C - used by a Dr. in France to good effect. Exposures were of only 45 seconds
on

each frequency. Longer exposures had no effect. 728, 166, 224, 317, 727, 787, 880, 2189
Multiple Sclerosis - Use of 5000 Hz for 30 minutes every other day, used the above Hep
C

protocol on alternate days. So one day 5000, next day Hep C. One should start the 5000
at

about 10 minutes and work up in time slowly watching for detox reactions.

Psoriasis - From New Zealand comes this protocol 2180, 2128, 2008, 1552, 880, 784, 664, 304

Systemic Lupus Erythematosus (SLE) - the above sequence for psoriasis has been used on one person with a severe active case of SLE with beneficial results.

Fruit Flies - 2167Hz reported by someone in the Netherlands

Chronic Fatigue Syndrome - 2127 , 465, 660, 666, 727, 787, 880, 1550. Also used parasite frequencies

Round Worms - 104, 332, 422, 721, 942, 3212, 240, 688, 20, 120

Flukes - 143, 275, 676, 763, 524, 854, 945, 651, 435, 524

Relieves the need to worry - very handy at times. - 6130Hz

Basal Cell Skin Carcinoma - 2116, 760, 2280 direct exposure of the lesion to light from the

tube helps as does pulsing the audio output. About 30 minutes exposures at 2116 seemed optimal, 760 and 2280 at 5 minutes each.

Lists of frequencies. Last part is 132 col format.

Use non-proportional font to display so the columns line up, if desired. The first list in this file

are frequencies from James Bare. These should be considered the most reliable (the non-theoretical ones, anyway).

My limited use of the Garvey frequencies indicate they may be useful, especially since there are specific ones for maladies, which can be used by the common, typical ones.

=====

The

following is a listing of these known MORs as compiled by Dr. Robert P. Stafford, M.D. a physician who worked with an original Rife machine from 1957 to 1963:

Microorganism Frequency in Hertz

Tetanus 120

Treponema 660

Gonorrhea 712

Staphlococci 728

Pneumococci 776

Streptothrix (fungus) 784

Streptococci 880

Typhoid Bacteria 712

Typhoid Virus 1862

Tuberculosis Rod Form 803

Tuberculosis Virus 1552 (same as B-Coli)

Sarcoma (all forms) 2008
Carcinoma (all forms) 2128

In that vein, here is a list that I've compiled. The format is frequency, what it supposedly effects, device, source
If the 'device' field says 'theory' it means that someone said this might work, but no-one has actually said anywhere that they've used it.
If the 'device' field says 'theory/440' then I took the frequency from Hulda Clark's book "The Cure For All Diseases" and divided by 440.

Notes:

1. Frequency codes 14, 16, 17, 20 and 28 affect more microbes and conditions than all other frequencies combined.
2. The second most effective group of frequencies is; 29, 42, 45, 48, 58 and 86. These are mainly used for parasites and amoebae.
3. Frequencies in the range of 11 to 29 produce the most rapid response, usually within 6 hours.
4. Frequencies in the range of 60 to 85 are those that seem to occur naturally in the brain. It is thought that behaviour can be influenced with harmonics of those same frequencies during behaviour of the opposite type. For example, to reduce/eliminate anger, one would apply a freq. of 6.3 Hz (code# 71).
See comments for those ranges.
5. Any good quality square-wave generator, such as those recommended for use with the James Bare Rife Device, should be able to output most or all of the Actual Frequencies listed in this document.

{ALL FOLLOWING is an extensive list of frequencies from many different sources scanned in and provided by Reid Smith. There are a number of scanner errors, typically "l" when should be an "i", as well as the number "0" being scanned as "e", "o", or "a", and many others. Try to verify frequencies before use due to possible scanning errors. It should be viewed in a fixed font for columns to align. I know nothing about "magic windows", color frequency therapy, or "weird effects." -- turf}

>>>>>>>included file>>>>>>>

In reference to moles changing with use of device I have a pad type unit which includes a manual with lots of frequencies. This manual warns: 1840 & 1910 HZ are known to have serious deleterious effects including stimulation of malignant growths. Also, it warns about possible detrimental problems with freq range 1000 to 2000 HZ.

802 Hz. should not be used if a healthy colon is involved, as it will kill both beneficial and detrimental bacteria.

turf's Frequency Lists

Here're a few freq sets. Sorry they are so long - I take every relevant freq I can find for the condition and run it, so they are generally applicable to a broad spectrum of potential pathogens. I would like to be able to identify the "best" freqs. This may not be possible without correct diagnosis (culture, e.g.), so maybe this is the best that can typically be done. The head/chest "colds" being treated with below freqs may very well be caused by bacteria and viral ones will not be cured by these sets. Frequencies are listed in numerical order. I don't think it matters in what order they are run.
I think that if any freq between 800 and 850(?) (esp 832) is used, a tablespoon or more of yogurt or a beneficial bacteria supplement should be used afterward.

IMPORTANT NOTES: Unless otherwise noted, general antiseptic frequencies (728, 784, 880, 464) should be used in addition to sets below and these will typically produce the most effect, such that the long list may not have to be used.

DON'T FORGET THEM!

In many cases, diseases are caused or contributed by lack of nutrients and toxin accumulation. These must be addressed. For example, it is unlikely that MS can be helped a great deal without adequate vitamin E, magnesium, selenium, and other nutrients, and lasting improvement or maintenance will not be achieved without removing mercury or other toxins. See individual regimens in maladies section of homepage for regimens in addition to frequencies below.

IN addition to any freq set below, use 728, 784, 880, 464.
Infections - Chest, ear, sinus, head colds. All have the potential to be interrelated, so if one set does not work, the freqs from another set can be used if there is not a profound improvement within 24 hours.

Sinus infection/head cold
20, 72, 120, 146, 160, 185, 333, 367, 456, 522,
802, 820, 952, 1500, 1550, 4400**, 5000, (728, 784, 880, 464)
Run 728 and any that can be felt for 5 minutes, the others for 3.
* Run 784, then 784 to 787 sweep. If no sweep, use 784 then 786.
I use sweep rate of 0.25 (4hz) for small diffs like this.
** Try scanning up and down by 8's (I sweep 4384 to 4416 at
4Hz).

Chest infection/cold
20, 120, 333, 412, 452, 464, 683, 766, 776, 1474,
4400**, 5000, 7344, 10000, (728, 784, 880, 464)
Run 766 (and any other that can be felt) for 5 minutes,
the others for 3 minutes.
** Try scanning up and down by 8's (I sweep 4384 to 4416 at
4Hz).

Ear infection
9.19, 20, 158, 201, 340, 440, 535, 542, 645, 652, 683,
801, 803, 875, 885, 1552, (728, 784, 880, 464)
Follow with 875-885 sweep.
Again, if not a definite improvement, try another set. For example, if an ear infection does not get better in 24 hours after using the ear infection freqs, use the head/sinus ones, and if no improvement in 24 hours after that, use the chest protocol.

Chronic Conditions
If the condition is chronic or there is no immediate improvement, add mold freqs:
866, 1823, 524, 374, 743, 702, 942, 853.
Presently (5/98), 866 is very valuable and should be used with any freq set above.
If these do not help, use the roundworm frequencies (20, 120, 650, 800) - use nonredundant ones if already in set.
If no improvement with these, use a more comprehensive parasite set.
General virus freqs (600, 625, 650, 666, 690) can also be tried if no relief.
Recent case of throat and tonsil infection that lasted a month and caused congestion, coughing, low grade fever, and sore throat (cultured negative to strep) was apparently actinomyces israeli - 222, 262, 2154

Parasite Sets
Full set contains freqs for many of the more common pathogenic parasites but there are many that are not listed. See the

frequency lists (especially the Garvey) for specific frequencies for diagnosed parasites if necessary. The short parasite set contains freqs for the most common parasites and is likely all that is needed by most, but if parasitic illness is certain and there is no detox to the short set, try the full one.

Always use 728, 784, 880, 464 with parasite sets.

Also, I have seen intestinal flukes expelled as a result of the cancer frequencies so if no relief, try them, especially 2128 (use long period, 10 minutes) along with 2008, 2050, 2084.

Vaginosis (non-specific infection)

414, 542, 642, 652, 800, 832, 845, 866, 942, (728, 784, 880, 464)

MASTER LIST

This table is a little rough on layout rather than alter the original copy.

<XMP> MASTER RATE SHEET GUDELINES All frequencies are given in Hertz at 4 to 5 volts SQUARE WAVE. Electrodes are to be applied directly onto the skin with a non-menthol shaving cream or electrode gel. Do not use oils or creams as they will insulate the transference of the energy to the body. In general: Drink one quart of polarized positive water with juice of lemon daily. Drink electrolyte solution 20 minutes before electromagnetic application. Electrolyte solution is made by adding 1/2 teaspoon rico polishings, 1/2 teaspoon granular tedthin, and 1/2 teaspoon whey INTO 1/2 glass of polarized positive water. You can polarize the water positive by placing the glass of water on a ceramic magnet ("polarizer") with the south side facing up for at least 2 minutes. Drink 1/4 teaspoon of Acidophilus in 1/2 glass of polarized positive water after energy application. COLOR POWER: Use 500 to 1000 watt projectors for one hour; minimum time between energy to be 3 hours. Use 150 watt color flood lamps for 1 and 1/2 hours minimum from head to toe. Use 40 watt color lamps for 2 and 1/4 hours. See pages 9-23 to 9-31 for details. Eyes: Use 12 watt lamps a; 12 volts. ;See: page 6-17 for application times. Nt~ERICAL COLOR CODE AS USED IN RATE CHART: 1...RED 2...ORANGE 3...YELLOW 4...LEMON 5...GREEN 6...TURQUOISE 7...BLUE 8...INDICO 9...VIOLET 10...PURPLE 11...MAGENTA 12...SCARLET SEE PAGE 613 TO 616. MAGNETIC THERAPY METHODS FOR SECTIONS 1-1 TO 7-12 MAY BE FOUND ON PAGE 609 to find FURTHER INFORMATION ABOUT MAGNETIC POLARITY MAY BE FOUND ON THE FOLLOWING PAGES: 356 to 357. 385 to 386. 389 to 412. 573 to 578. and 602 to 608. These method numbers are placed in brackets, for example, [10,14,8]. P.R.M. section and page numbers are mixed in with the method numbers, and are given in the order that they should be used. Updated Frequency List

This list is a compendium of frequencies that have been reported by users of a device to have actual physiologic effects. Some of these are well known frequencies, used in a unique sequence, others are completely new heretofore unknown frequencies. This list will be updated as results are reported to me, all information should be considered as anecdotal, and not scientifically proven. These frequencies should not be considered as anything but experimental. USE AT YOUR OWN RISK, NO CLAIMS ARE MADE FOR EFFECTIVENESS.

304 - Sedation or pain relief, also nice to use as the last frequency of a set of frequencies

Fibromyalgia and Joint Pains - This set has many positive reports of symptomatic relief lasting from several days to almost a week. 650, 625, 600, 240, 95, 522, 2900, 28 .

Lyme Disease 432, 484, 610, 690, 790, and 864 - Please note the use of these frequencies has produced what is known as a Herxheimer Reaction. As the spirochetes die, they release a protein toxin that can produce joint pains, weakness, and general malaise for a few days following exposure. It has been suggested that one start slow with but a minute of exposure and then gradually increase the exposure time. One should not repeat an exposure until all effects and symptoms of the previous exposure have cleared.

Lyme Disease - reported 2001 - all the above plus - 652, 1103, 1500, 4200, 450, 465.

Helicobacter Pylori - 676 linked as a causative agent in stomach ulcers.

728 - A type of Cancer cell found in blood of people with Multiple Myeloma. Causes the cells to disintegrate according to one researcher.

Flu Virus 728, 800, 880 , 7760, 8000, 8250

2050, 2180, 2452 - Non responsive to Cancer at 2128 or 2008. It has been suggested that these Cancers are formed in response to some different stimulus than commonly occurs.

Cataracts - 1830, 1600, 9999, 1552, 2110, 1335, 1654, 2187, 2195, 2211

664, 764 - very beneficial for emotional ties to diseases. 664 has apparently caused people to giggle especially in a group exposure setting.

660, 728, 787 Epstein Barr virus also has been used for Mononucleosis.

1234, 3672, 7344 Opens bronchioles makes breathing easier seems to be helpful for asthmatics. Also is quite sedating.7344 seems to work best of the three.

Sharpens Eyesight 350, 360

Herpes Zoster 1489, 1500, 1550, 2489 - relieves acute outbreak, but does not remove dormant form from body. Use of 2489 for about 30 minutes seems to provide long term benefits.

Menieres Disease - Removed all pain associated with. 9 Hz.

Hand Tremors 470 - stopped involuntary tremors in left hand of a person with multiple sclerosis.

463 and 466 stopped involuntary tremors in a person with brain tumors.

915 and 918 plantar wart - use long exposure time - 15 to 30 minutes on each frequency.

Prostatitis 2050 and 2250 - 10 to 15 minutes on each frequency. Use for a short interval will aggravate prostatitis!

3.6 and 6.3 Hz have been reported as being able to keep a person from becoming angry

Nausea and abdominal cramps 72, 95, 190, 304

Chlamydia infections 866, 430, 2213, 620

6000 - A master Central Nervous System Frequency. Release of emotional problems, blocked seizures - but does nothing once seizure starts, stopped tremors in hands in person with Parkinson's disease.

Multiple Sclerosis - Use of 5000 Hz for 30 minutes every other day, used the above Hep

C protocol on alternate days. So one day 5000, next day Hep C. One should start the 5000 at about 10 minutes and work up in time slowly watching for detox reactions.

Psoriasis - From New Zealand comes this protocol 2180, 2128, 2008, 1552, 880, 784, 664, 304

A Brief Summary of the DNA-derived Frequency Theory

Charlene Boehm

This Method, and It's Associated Variants, is US Patent Pending.

Upon consideration that DNA could be an informational source of frequencies for use in various electrotherapeutic devices, the DNA chain can be compared to a simple length of linear antenna. In reality, DNA has dipole characteristics, i.e., there is directionality to how the charged molecular components are aligned in the chain. If one were to unravel the DNA chain and take a close look at one of the strands, it will have a positive charge on one end, and a negative charge on the other, due to the alignment of the molecular units (nucleotides). This gives the strand characteristics of an antenna. Indeed, it is now known that DNA has conducting and even super-conducting characteristics.

When the two strands of DNA are connected (bonded) with each other in its usual form, they are aligned parallel to each other but have opposite polarities:

+ _____ - - _____ +

(For simplicity, the two strands in this simple diagram are shown in untwisted form).

To make things even more interesting, when the two strands of DNA are twisted and bonded together in its normal state, there are negatively-charged molecular ions that run along the entire length on the outer surface of the chain, in a helical fashion. Thus we see that the chain could be very likely sensitive to the influences of electromagnetic fields, in particular electric fields.

In radio science, the length of an antenna will largely determine how effectively it

responds to the wavelength energy of an incoming transmission. Likewise, it has been proposed that the length of any particular piece of DNA can be resonated, using the same principle. Another way of approaching this is to consider the piece of DNA as a length of a string on a musical instrument such as a guitar. As one shortens the speaking length of the string with one's finger, the pitch or resonance of the string will change.

The full details of the DNA-resonance theory have been presented in a different paper (1). Since the publication of that paper, a simplified mathematical procedure has been worked out, making it much easier to arrive at the frequencies that relate to the DNA chain under consideration. The numerical constant 4,526,016.44 was arrived at by a person trained in physics and mathematics, and uses a process too lengthy to explain in this paper. The formula for calculating a possible frequency is:

$$4,526,016.44 / \# \text{ of base pairs in the chain} = \text{frequency}$$

For example, if there are 5,000 base pair molecules (nucleotides) in the DNA chain:

$$4,526,016.44 / 5,000 = 906.26 \text{ hz}$$

(1) Boehm, Charlene. "A Look At the Frequencies of Rife-related Plasma Emission Devices". Published on the internet at:

Electroplasma Digest

Bruce Stenulsons Site

Electroherbalism Home Page

If there are 22,000 base pairs in the chain:

$$4,526,016.44 / 22,000 = 205.97 \text{ hz}$$

And if there are 250 base pairs in the chain:

$$4,526,016.44 / 250 = 18,125.29 \text{ hz}$$

For some frequency-emitting electrotherapeutic devices, the electromagnetic fields with the frequencies just arrived at in the above examples may not be attainable due to the technical limitations of the device. Indeed, any one type of device will quite often supply

the electromagnetic fields with frequencies only in certain ranges. To overcome such limitations, the frequency can be adjusted upwards or downwards in a certain simple manner. In music, it would be termed going to a higher or lower octave. This would in effect cut the wavelength exactly in half (if going to a higher octave), or would exactly double the wavelength (if going to a lower octave).

When one needs to go to a lower range frequency, as in the last example above, one can simply divide the frequency number by 2, as many times as necessary, until arriving at the range wanted. Using that example:

$$18,125.29 \text{ hz} / 2 = 9062.645 \text{ hz}$$

$$9062.645 \text{ hz} / 2 = 4531.32 \text{ hz}$$

$$4531.32 \text{ hz} / 2 = 2265.66 \text{ hz}$$

$$2265.66 \text{ hz} / 2 = 1132.83 \text{ hz}$$

$$1132.83 \text{ hz} / 2 = 566.42 \text{ hz}$$

One could also arrive at the final result using a shorter method, which would be dividing the original frequency by 32:

$$18,125.29 \text{ hz} / 32 = 566.42 \text{ hz}$$

Indeed, there is a set of dividers (or multipliers, if one wants to go upwards), that can be used to accurately convert frequencies to the desired range. They are:

2 4 8 16 32 64 128 256 512 1024 2048 4096 etc.

Using these numbers, one can assume a sympathetic vibration is occurring at a "mathematically resonant frequency", or a "mathematically resonant wavelength".

So, where does one go to find DNA base pair information on an item that one wants to affect in some way? There are databases available on the internet that give DNA / RNA base pair coding information for millions of items. One must learn how to use and extract the proper information from these databases; while it is not difficult, it takes a little practice, and willingness to learn a few things along the way. These databases are located at:

Maestro Site

Entrez Site

Sometimes there is valuable information that can be found in books and journals relating to biochemistry, and molecular and cell biology. Take advantage of search engines and indexes to find what is needed.

There is yet another angle to the DNA / RNA approach that seems to be getting recent attention. Sometimes, if we only have basic information about a protein, i.e., how many amino acids are in the protein chain, we may be able to find a usable frequency from this information. Because an amino acid is ALWAYS coded by three base pairs in the messenger RNA, we can arrive at a base pair number by multiplying the number of amino acids in a protein chain by 3.

For example, if there are 100 amino acids in a protein, there would be 300 base pairs in the final messenger RNA related to that protein. Then, to arrive at a frequency:

$$4,526,016.44 / 300 \text{ base pairs} = 15,104.4 \text{ hz}$$

and to arrive at a lower range,

$$15,104.4 / 32 = 472 \text{ hz}$$

There is another internet database that gives ONLY amino acid information about many thousands of proteins. It is located at:

Amino Acids

It is hoped that this very brief summary will be helpful in understanding and using the DNA-related information for frequency research. The concepts discussed in this paper are not intended to suggest treatment for any disease or condition, and this writer makes no claim that they could in any way affect any person's state of health.

Electrical wave forms

One of the benefits of working with electrical stimulation is the ability to generate precise and complex waveforms. It is likely that specific waveforms have specific functions. Brain stimulation, frequencies and waveforms are a vast and promising field of experimentation for alchemists.

Magic Windows

Magic windows are frequencies which (according to Thomas E. Bearden) are especially suited for coupling to and bringing energies from other dimensions. These are the frequencies:

38-40 kHz

150-160 kHz

1.1-1.3 MHz

1.057 GHz

Somewhere in the Infrared

The life energy frequency (in the near ultraviolet)

These frequencies were found in the "Excalibur Briefing", a book on the paranormal and new science, by Bearden.

38-40 kHz was mentioned in a incident of a strange light being seen, and it appears to be described as a promising frequency range. It is also low enough to be easy to experiment with.

150-160 kHz is also not too high. I also heard that 160-180 kHz is declared an experimenters band by the FCC, but I can not substantiate that. If so, 160 kHz would be a promising frequency indeed.

1.1-1.3 MHz is kind of high to easily produce. It also unfortunately is extremely regulated by the FCC, so watch your emissions! Why you ask?

1.1-1.3 MHz is 1100-1300 kHz which is ... 1100-1300 on your AM dial. It would be REALLY _bad_ to those commercial AM radio. Not nice at all. Bad for you, and bad for all those people who want to listen to their favorite radio station in that band. So don't do it!

1.057 GHz is the Lamb shift. Has something to do with emission lines shifting. Extremely high, hard to produce without a magnetron or something similar. Possibly could cook you. By the way, microwave ovens run at 2.45 GHz, so 1.057 GHz, being almost half that value, may be too close for comfort.

Somewhere in the infrared region is a magic window.

The last one, the "life energy" frequency is in the near ultraviolet. Obviously you can't use purely electronic means to produce it, since it is optical. Wavelength is the unit of choice here, as for the frequency, I think it is around 10^{15} Hz (10 PHz, i.e. 10 petaHertz), i.e. extremely fast. This was probably the frequency used by the Russian scientist Vlail P. Kaznacheyev in his experiment. The result of the experiment, the Kaznacheyev effect, is that if a cell culture is killed or injured, and the "death" photons from it are sent to another culture, which in the absence of visible light (which would quench the paranormal effects, see the abovementioned Excalibur Briefing), suffers the same effects. This is called death transmission via the paranormal channel. Perhaps using different filters one could narrow down the wavelength and frequency. Possibly by phase-conjugating (time-reversing) death photons one could achieve cures for disease.
